

LEAKY LIGHTS

Leaky Light fixtures leak light up and out and all about! Leaky lights spray so much light up in the sky that little light is left

to provide safety and security on the ground. Why light up the sky and waste energy dollars? Let's put light in its place--**down** on the targets of safety and security, not up in the sky!

SMART LIGHTS

SMART LIGHTS shine **down** on targets of safety and security, not up in the sky or out in your eyes. The sky stays dark and nighttime driving is safer. **Smart Lights** use smaller bulbs, less electricity and save money.

What Can You Do?

• BE AWARE

Are lights in your community **Smart Lights**, aimed only at targets of safety and security: people, houses, yards, buildings, vehicles, doorways, windows, etc? If not, **demand** Smart Lights and Dark Skies!

• ACT Liberate Starlight Tonight!

IGNITE A DARK SKY REVOLUTION!

1. Look for Leaky Lights where you live. Then, tactfully, but tenaciously, tell local business owners and city officials, "Switch on Smart Lights! Save money and starlight!"
2. Persuade 10 other people to do likewise.

STUDENTS / TEACHERS K-12:

You can rescue the milky way. Please . . .

- adopt local leaky streetlights / business lights
- get them converted to Smart Lights
- convince 10 other people to do likewise.

LEAKY LIGHTS:

- cost you money
- compromise your safety and security
- steal starlight, shared by all humanity.

Please press forward with all possible dispatch to save starlight over your community with our simple, common sense formula: **SL = SN...**

Smart Lights = Starry Nights™

My 28 years teaching astronomy and 55 years as a stargazer / amateur astronomer will help you restore the Milky Way over your community with **SMART LIGHTS** and unique **LIGHTSCAPES**.

The website below offers suggestions.

Is she pointing to the future or past? BOTH. **FUTURE**--when the Milky Way is once again visible. **PAST**--starlight is *fossil* light from the distant past.
